Source: Li J, Udayasankar UK, Toth TL et al. Automatic patient centering for MDCT: effect on radiation dose. AJR 2007; 188: 547 – 552 and Kaasalainen T, Palmu K, Lampinen A et al. Effect of vertical positioning on organ dose, image noise and contrast in pediatric chest CT-phantom study. Pediatric radiology 2013; 43: 673 – 684.

- “Prevalence and Severity of off-centering during diagnostic CT: observations from 46,621 CT scans of the chest, abdomen, and/or pelvis” in Current Problems in Diagnostic Radiology, 2018, article in press.

Pozice pacienta

FAST 3D Camera pro standardizaci pozice pacienta

FAST Isocenter

Pro správnou dávkovou
moduaci

FAST Range

Pro přesné zacílení skenované
anatomie

FAST Direction

Pro správný skenovací
směr

FAST 3D Camera: Jak pracuje?

Vstup

- RGB kamera
- IR kamera= 3D depth data
- Anatom. značky
- Avatar
- Korekce – Auto Offset

Avatar:
Model-fitting

Computed Tomography

Výstup

FAST Range

- Identifikace těla
- Identifikace skenované oblasti

FAST Direction

- Identifikace orientace pacienta

FAST Isocentering

- Identifikace izocentra

Pracovní postup s FAST 3D kamerou

- 5 System automatically detects patient orientation
- 6 System sends 3D Depth Images and CT scan to storage regions based on landmarks (e.g. thorax)

Scan&GO: Intelligentní algoritmus – standardizace pracovních postupů, kvalita, dávka

**Self-learning
protocol selection¹⁾**

manual
annotations

Artificial
Intelligence

Computed Tomography

- 1) Based on clinical indication (requested procedure) and previous manual choices.

ALPHA technologie

ALPHA technologie automaticky detekuje anatomické značky a struktury v CT obrazech

Automatické výstupy:

- Anatomické oblasti – rozsahy skenování na topogramu
- Nastavení vrstev vzhledem k anatomii
- Anatomické presety (paralelní, radiální, zakřivené)
- Značení obratlových těl a žeber
- Anatomická registrace: multiple timepoint registration – vyš. téhož pacienta v různých dnech

ALPHA technologie – vývoj

Manual
annotation on
hundreds of
images

Detector training:
Landmarks + reference
regions surrounding the
landmark

Asistivní technologie

Fully Assisting Scanner Technologies (Siemens)

FAST Adjust -

Skener automaticky upravuje:

1. Skenovací čas
2. max. mAs

FAST Planning asistence při plánování skenu a rekonstrukce založené na topogramu (usnadnění a zrychlení plánování vyš., standardizace vyš.).

- výběr anatomické oblast zájmu
- automatická detekce a event. sklon dle anatom. bodů
- zúžení nebo rozšíření lateral FOV
- optimalizace FOV na rozsah např. hlavy (min.200mm)
- automatické nastavení do isocentra

FAST Planning

Benefity:

- Méně úprav skenovaného rozsahu
- Prevence nedostatečného požadovaného anatomického pokrytí
- Prevence nadměrného pokrytí nad rámec požadovaného (neodůvodněná radiační zátěž)
- Automatizované pracovní postupy šetří čas přípravy

Based on
ALPHA
technology/
manual
annotations

Artificial
Intelligence

Computed Tomography

FAST Spine

Th5

Bez FAST Spine

S FAST Spine

Benefity:

- Automatické značení páteřního kanálu, jeho segmentů a obratlových těl
- Rychlejší a snazší hodnocení CT obrazů páteře
- Standardizace a reprodukovatelnost

Based on
ALPHA
technology/
manual
annotations

Artificial
Intelligence

Computed Tomography

Check&GO: Inteligentní algoritmus pro potvrzení kvality skenu

Benefity: kontrola

- Distribuce kontrastu
- Skenovaný rozsah vč. orgánového pokrytí

Artificial
Intelligence

Based on
ALPHA
technology/
manual
annotations

Benefity AI v CT systémech

Podpora čtení CT obrazu

- Značení anatom. struktur
- Automatická orgánová vizualizace

Podpora tvorby nálezu

- Detekce plicních nodulů
- Kalkulace skóre (např. Agaston)

Usnadnění plánování skenu

- Automatická kalkulace FOV
- Kontrola kvality, úprava parametrů

Post-processing podporovaný AI

syngo.CT Coronary Analysis:

- Curved and 3D display of coronaries
- Segmentation and 3D display of the heart

syngo.CT Vascular Analysis:

- Automatic 3D display of vessels
- Automatic bone removal
- Curved view of aorta, carotids, renal vessels and run-offs

syngo.CT CaScoring:

- Automatic calculation of Total Agatston score

syngo.CT Cardiac Function:

- Automatic segmentation of right and left ventricle

Artificial Intelligence – budoucnost v CT aplikacích

Benefity:

- Zvýraznění anatomíí a abnormalit
- Charakterizace a kvantifikace anatomíí a abnormalit
- Měření anatomíí a abnormalit
- Vytvoření reportu

Artificial
Intelligence

Computed Tomography

Návod pro uživatele jak dále individualizovat CT zobrazení

- Automatický vstup

RIS

- Age
- Sex
- ...

ECG

- Heart rate
- HR variability

FAST 3D
Camera

- Izocentrické nastavení → přesné plánování rozsahu skenu z topogramu nižší dávka, lepší kontrast

Computed Tomography

- Manuální vstup

User

- Může pac. zadržet dech na více než > 5 s?
- Má pacient kovové implantáty?
- ...

myExam Compass

první krok do éry inteligentního CT zobrazování

myExam Compass

20+ rozhodovacích stromů pro **routinní** a **pokročilé** klinické aplikace, automaticky optimalizuje akviziční a rekonstrukční parametry k individuálnímu pacientovi a klinické otázce

Routinní

- General multi-organ laterality (left / right)
- Metal: iMAR
- FoV / speed
- Soft tissue / bone
- Sinus dose
- CM / non-CM
- CTA
- Thorax screening / standard
- Thorax X-CARE / standard

Pokročilé

Cardio

- Sequential / spiral / bi-Segment
- Pulsing window: Diastole / systole

Dual Energy multi-organ

- Spectral / FoV
- Spectral / speed
- Spectral / low kV

Computed Tomography

**Patient-friendly design with
an 82 cm bore**

CT DE

Duální energie

- Některé materiály mají pro různé energie různý koeficient zeslabení (tedy i různé HU)

Princip duální energie

- Vyšší HU při nízkých kV má jód, kost, kov...
- Vyšší HU při vysokých kV má plast, soli kys. močové...
- Převážně stejné HU při obou energiích má voda, měkká tkáň, krev
- Diferenciace mezi tukem a jódem: jód má světlý kontrast, tuk má tmavý kontrast

Dual Energy CT

Generace - jeden rtg zdroj

Dvě spirály nabírané postupně s různou energií

1st spiral
@ low kV

2nd spiral
@ high kV

Generace Twin Beam - jeden
rtg zdroj a split filtr – dělí svazek
na dvě různé energie

Jedna dělená spirála

Generace - dva rtg zdroje (Dual Source DSCT)
o různé energii (různé kV)

Dvě spirály nabírané simultánně

Duální energie CT - Klinický benefit

- Duální energie (DE) má potenciál zvýraznit, charakterizovat, kvantifikovat a odlišit orgánová postižení v jednom CT skenu.

Praktické aplikace z CTDE dat

Material Decomposition

Material Labeling

Material Highlighting

Image Quality Improvement

- Optimum Contrast
- Monoenergetic

Generic Material Differentiation

- Dual Energy Index
- r_e/Z_{eff} decomposition*

Dual Energy CT – klinické využití

DE Brain Hemorrhage

Dual Energy Mixed

Hyperdensity
outside
aneurysm

Dual Energy Virtual noncontrast

Iodine is only in
aneurysm

Dual Energy Iodine map

Various neuro-radiological indications require differentiation between iodine and blood. On standard 120 kVp CT imaging, iodine and blood have similar HU values. DECT enables the calculation of virtual noncontrast and iodine map series, which can be useful for iodine quantification and visualization of HU differences in such cases.

Zlepšení obrazového kontrastu s DE *syngo*.CT DE Monoenergetic Plus

- **SOMATOM Force**

- Scan time: 16.62 s
- Scan length: 742 mm
- 100 kV
- Sn150 kV
- CTDI_{vol}: 8.77 mGy
- DLP: 642.2 mGy cm

Monoenergetic image at 70 keV
(equals 120 kV conventional CT
image impression)

Monoenergetic Plus 40 keV

Monoenergetic Plus 40 keV

Dual Source Dual Energy CT:

- **fast whole-body imaging**
- **low radiation, dose-neutral acquisition**
- **provides additional quantitative information**

Analýza orgánové perfuze s DE *syngo*.CT DE Lung Analysis: multičetná plicní embolie

SOMATOM Force

Scan time: 1.9 s

Scan length: 252 mm

90 kV

Sn150 kV

CTDI_{vol}: 2.91 mGy

DLP: 63.3 mGy cm

Eff. dose: 0.89 mSv

The speed of Dual Source Dual Energy enables easy visualization of perfusion defects in the lung that were previously difficult to visualize with CT, sometimes requiring other imaging modalities to be used.

Analýza orgánové perfuze s DE *syngo*.CT DE Heart PBV: myocardial perfusion

SOMATOM Force

Scan time: 2.3 s

Scan length: 97 mm

90 kV

Sn150 kV

CTDI_{vol}: 20.75 mGy

DLP: 266.3 mGy cm

Eff. dose: 3.7 mSv

MRI image → no defect

DE CT iodine map → perfusion defect

CTA → LAD stenosis

The speed of Dual Source Dual Energy enables easy visualization of perfusion defects in the lung that were previously difficult to visualize with CT, sometimes requiring other imaging modalities to be used.

Inv. CTA → LAD stenosis

Vyhodnocení kostních struktur s DE *syngo*.CT DE Bone Marrow

SOMATOM Force

Scan time: 12.08 s

Scan length: 533 mm

100 kV

Sn150 kV

CTDI_{vol}: 5.28 mGy

DLP: 276.5 mGy cm

Conventional CT image

Dual Energy Bone Marrow CT

Dual Source Dual Energy CT advantages:

- **fast whole-body imaging**
- clear spectral separation between kV values

Vizualizace a analýza cév a perfuze

Vyhodnocení plicní embolie s barevným kódováním postižených cév

Color-
coded
affected
vessels

Expand your capabilities in clinical routine with easy visualization of perfusion defects in the lung that were previously difficult to visualize with CT, sometimes requiring other imaging modalities to be used.

Charakterizace močových kamenů – určení převahy vápenatých nebo měkkých iontů

Dual/Multi Energy

Detection and Characterization of Renal Stones by Using Photon-Counting-based CT.

Marcus RP, Fletcher JG, Ferrero A, Leng S, Halaweish AF, Gutjahr R, Vrtiska TJ, Wells ML, Enders FT, McCollough CH.

Radiology. 2018 Aug 7:180126. doi: 10.1148/radiol.2018180126. [Epub ahead of print]

Determination of Optimal Image Type and Lowest Detectable Concentration for Iodine Detection on a Photon Counting

Detector-Based Multi-Energy CT System.

Zhou W, Schornak R, Michalak G, Weaver J, Abdurakhimova D, Ferrero A, Fetterly KA, McCollough CH, Leng S. Proc SPIE Int Soc Opt Eng. 2018 Mar;10573. pii: 105734U. doi: 10.1117/12.2294949.

Three-Material Decomposition in Multi-energy CT: Impact of Prior Information on Noise and Bias.

Ren L, McCollough CH, Yu L.

Proc SPIE Int Soc Opt Eng. 2018 Mar;10573. pii: 105731G. doi: 10.1117/12.2294953.

Characterization of Urinary Stone Composition by Use of Whole-body, Photon-counting Detector CT.

Ferrero A, Gutjahr R, Halaweish AF, Leng S, McCollough CH.

Acad Radiol. 2018 Feb 14. pii: S1076-6332(18)30019-9. doi: 10.1016/j.acra.2018.01.007. [Epub ahead of print]
